

Forklift Fork Positioner

Forklift Fork Positioner - The fork positioner is a hydraulic device which can allow the the one driving to be able to control the lift truck without leaving the seat. They are constructed out of high quality materials and are meant to be able to endure the most challenging operations and work surroundings. Side shifting units have the extra ability to be able to laterally position the entire load or the arms so as to facilitate more precise carrying and position in a quicker and much more effective way.

The blade pocket is quite unique and could enable the person operating it to securely sway the blades into position without any fear of destroying the positioning cylinders. This allows the driver the option to execute simultaneous or independent fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into blade positioners on existing units.
